

Veradigm Launches Health Network Architecture to Level the Playing Field for Independent Practices

May 6, 2026

CHICAGO--(BUSINESS WIRE)--May 6, 2026-- [Veradigm®](#) (OTCMKTS: MDRX), a leading provider of clinical and revenue cycle solutions for independent practices, today announced the availability of the Veradigm Health Network Architecture™ to early adopter customers. Veradigm Health Network Architecture provides independent practices a single real-time view of their clinical, financial, and operational performance and helps close a capability gap that has historically separated independent practices from large health systems. It connects data across the products practices already use, from EHR and practice management to clearinghouse and patient portal. Instead of overnight batch cycles and manual data stitching, information flows together as physicians document.

The Data Gap for Independent Practices

- Independent practices lack real-time visibility, causing delayed awareness of billing issues, missed care gaps, and lost quality incentives
- Practices manage 15+ separate applications, with staff manually bridging gaps between systems
- By the time traditional reports reveal a problem, the data is weeks old and the window to act has most likely closed

“For years, healthcare technology added a new tool for every new requirement, but never a way to make them work together,” said Tehsin Syed, Chief Product and Technology Officer of Veradigm. “Veradigm Health Network Architecture changes that. It turns disconnected systems into one coordinated platform where information is usable the moment it’s created.”

What Changes With Health Network Architecture

- Quality measures and care gaps update in real time as physicians document — enabling in-visit action instead of quarterly flags
- Prior authorizations automatically carry full clinical context, reducing errors and denials upfront
- Denial patterns are detected after a handful of claims, not hundreds, allowing quicker correction
- Delivers large health system-level analytics to independent practices — without adding headcount

Health Network Architecture is powered by the Veradigm network across EHR, practice management, clearinghouse, and patient engagement solutions. Veradigm FollowMyHealth connects into the same unified view, making the patient relationship visible alongside clinical and financial data. The connectivity extends beyond the practice: joining a new accountable care organization, connecting to a public health registry, or linking into a payer program now happens in days through standards-based FHIR APIs, rather than a months-long custom integration project.

For payers, care gaps that close during the visit can result in lower outreach costs and more accurate risk adjustment coding, while chart retrieval that once took weeks, takes minutes. For life sciences organizations, the architecture delivers real-world data from live clinical workflows, therapy switch signals grounded in current clinical context, and a consented patient connection through FollowMyHealth for real-world surveys and patient-reported outcomes. Health Network Architecture provides a unified, real-time data layer and also serves as the foundation for AI-powered workflows that can assist with coding, claims, and clinical decision support across the network.

Veradigm Health Network Architecture is available today to early adopter customers across Veradigm EHR, Veradigm Practice Management, Veradigm Payerpath, and FollowMyHealth from Veradigm, with general availability in the coming weeks. Additional capabilities will roll out throughout 2026, including intelligent claim scrubbing, AI-assisted prior authorization, and clinical trial patient matching.

About Veradigm®

Veradigm has a proven history of delivering clinical and revenue cycle solutions that help independent practices improve outcomes and financial performance. Our AI-forward data and technology also help over 20,000 provider practices connect with health plans and biopharma to eliminate inefficiencies, close care gaps, and create a more affordable health system.
